[redacted]

PROJECTS

JOBSEEKR

- Developed Jobseekr, an innovative ASP.NET MVC platform transforming the job-seeking experience for employers and candidates.
- Enabled seamless job posting, application management, and candidate interaction for employers.
- Streamlined the application process for job seekers, fostering communication and feedback.
- Managed the project efficiently with JIRA , ensuring collaboration and tracking progress.
- Deployed on Microsoft Azure for scalability and reliability. Explore live application here

PASSWORD GENERATOR TELEGRAM BOT

- Developed a secure Telegram bot in C# using the .NET Client for Telegram Bot API.
- Empowered users to generate strong and random passwords on demand, enhancing security measures.
- Enables users to generate strong 25-character passwords with a mix of characters and symbols.
- Prioritized user security by incorporating uppercase letters, lowercase letters, special symbols, and numbers.
- Check the bot's GitHub repository here for instructions on running the bot.

CURRENCY EXCHANGE TELEGRAM BOT

- Developed a strong Telegram bot in C# using the .NET Client for Telegram Bot API.
- Enables users to check exchange rates and perform currency conversions within Telegram chats.
- Check the bot's GitHub repository here for instructions on running the bot.

REACT RESTAURANT APP

- Crafted a straightforward restaurant app using React, Material-UI, and Vite for a delightful user experience.
- Implemented a responsive design, ensuring optimal functionality across various devices for user convenience.
- Showcased an enticing menu, allowing users to explore a variety of dishes.
- Hosted the application on GitHub Pages for easy and convenient access.
- Check out the live application here .
