### CAREER SUMMARY

#### Jan 2019 - Present

#### Offchain Labs, Boston, MA Blockchain Project Manager

##### Outline

Spearhead blockchain infrastructure processing and security controls to assure systems reliably perform at peak efficiency, for a software company with 100+ staff that reduces costs and increases capacity through building a suite of scalable Ethereum solutions.

##### Key Responsibilities

- Oversee the design, build, and implementation of blockchain-native products that facilitate processes of recording transactions and tracking assets in business networks..
- Establish a PMO to ensure projects are effectively executed against internal/external client expectations and iteratively delivered on time, on budget, and error-free.
- Act as the primary point of contact by communicating with all stakeholders throughout blockchain development life cycles concerning specialized features.
- Encourage the use of continuous integration (CI) and automation through tools that integrate chunks of code into central repositories.
- Select the proper software release management system and processes to support rapid growth of the product portfolio.
- elect the proper software release management system and processes to support rapid growth of the product portfolio.
- Host daily stand-up and sprint meetings team meetings to receive project progress, address potential roadblocks, and ensure team meet desired outcomes.
- Use appropriate verification techniques to manage changes in project scope, schedules, milestones, budgets, and costs.

##### Key Achievements

- Saved \$50K+ annually through organizing cost control measures and applying novel project management methodologies.
- Increased work flow by 40% due to maintaining consistent communication, managing client needs, attaining project timeline targets.
- Implemented an IT project management system that enhanced team efficiency by 25%.

#### Jul 2014 - Dec 2018

#### CGI Technologies Corporation, Boston, MA Blockchain Project Manager/Scrum Master

##### Outline

Coordinated blockchain processing software, application, and operational issues, for one of the largest business consulting services firm that accelerates 10K+ global clients' ROI through sustainable next-gen IT solutions.
