EMPLOYMENT

Database Engineer at Employer A

Jersey City | January 2018 to Present

- Backed up, monitored and secured over 500 databases with a 99.7% uptime rate across multiple platforms including SQL Server, Oracle & MySQL.
- Represented the Database Engineering department in regular meetings with clients to discuss database requirements; resolved client queries and issues within an average of 72 hours per project cycle.
- Effectively managed system performance by troubleshooting problems related to database availability, integrity and security for 10+ applications while utilizing tools such as Visual Studio Enterprise Edition & Access Manager Pro Plus 2019*.
- Implemented changes to existing systems that increased overall efficiency by 25%, allowing for seamless data integration between private networks used by 40+ remote users at any given time.
- Mentored junior staff members on various aspects of database engineering such as query optimization techniques and best practices when building new structures or automating processes using scripting languages like Python & Ruby on Rails.

Database Engineer at Employer B

Santa Rosa | March 2012 to December 2017

- Upgraded server infrastructure to the latest version of Oracle Database, resulting in an increase of 30% in data storage capabilities.
- Designed efficient database systems from scratch and enhanced existing architectures to meet customer needs; reduced query response times by 40%.
- Meticulously monitored system performance, identified potential issues and implemented solutions for a portfolio of over 200 databases with 100+ GBs each.
- Administered user accounts privileges, assigned roles & rights based on company security standards and granted access as needed after thorough evaluation processes; improved overall data protection protocol by 15%.
- Tested new software releases against sample datasets before rolling out updates across entire network; minimized downtime instances by 25% while ensuring optimal application performance at all times.
