## SKILLS

---

•

area, and mitigated >

- Lead commissioning and performance verification

### **procedure development, tech**

- Managed vendor relationship, execution contractor safety performance, and construction oversight, developed and implemented management of change procedures, punch list tracking, and led pre-startup safety reviews of systems

- Served as technical project manager throughout the project - frequently worked with internal and external business partners, contractors, and vendors to optimize performance, mitigate efficiency issues, and resolve day to day conflicts throughout construction and start up - mitigated 4 month delay by providing alternative design to eliminate environmental regulation conflict

- Responsible for overall design, development and training and change control procedures

- Continuously challenged in

- Types of projects designed: Water chemical treatment, Cooling towers, Furnaces, Condensate system, Tankage, Fire Protection, Liquid Overfill, Tower Optimization, BLEVE mitigation, HAZOP Follow-ups, Operations cost reductions, Unit Debottlenecking

- Established project schedules and monitored tasks to meet milestones during each phase.
  - Drove operational improvements which resulted in savings and improved profit margins.

- Provides process design and project development technical leadership

- Provides process design
- Leading development of

- Provides technical recommendation on fit-for-purpose project plans and responsible for updating internal road map to reflect alternative project path options; skipping gates, reducing deliverables, overlapping project stages..etc. to meet project deadlines S
